Wikipedia, the free encyclopedia
(directed from Web Page)

A **web page** or **webpage** is a document or information resource that is suitable for the World Wide Web and can be accessed through a web browser and displayed on a monitor or mobile device. This information is usually in HTML or XHTML format, and may provide navigation to other web pages via hypertext links. Web pages frequently subsume other resources such as style sheets, scripts and images into their final presentation.

Web pages may be retrieved from a local computer or from a remote web server. A web server may restrict access only to a private network, e.g. a corporate intranet, or it may publish pages on the World Wide Web. Web pages are stored and served from web servers using Hypertext Transfer Protocol (HTTP).

Web pages may consist of files of static text and other content stored within the server's file system (static web pages), or may be constructed by server-side software when they are requested (dynamic web pages). Client-side scripting can make web pages more responsive to user input once on the client browser.

A screenshot of a web page on Wikipedia. The page title is 'Web page'. The content describes what a web page is, how it is accessed, and its components. It mentions that web pages can be static or dynamic, and can be served from a local computer or a remote web server. The page also includes a sidebar with navigation links and a table of contents.
